PORTFOLIO KOD PROGRAM JAVA

Kod program

```java
//A simple Java code segment that record mango sales in Kg across the week, calculates total sales, average sales, profit and determines highest  or lowest sales//
/* Name : RANIA ADLYN NAZURAH BINTI MOHD RIDZUWAN */
/* Project : WEEKLY MANGO SALES  ANALYZER*/

import java.util.Scanner;
public class MangoSold{
   public static void main(String[] args) {
      Scanner sc = new Scanner (System.in);

      //Store days of the week//
      String[] day = {"Sunday", "Monday", "Tuesday", "Wednesday", "Thursday"};

      //Array to store daily mango sales//
      int [] amount = new int [ 5 ] ;
      int total= 0;

      //input mango sales each day and calculate total sales of the week//
      System.out.println("Amount of mango sold (in kg) on ");
      for(int i=0; i<day.length; i++) {
         System.out.print( day[i]+ ": ") ;
         amount [ i ] = sc.nextInt();

         total = total + amount[i];
      }
      //calculate average and profit of the week//
      int average = total/5;
      double profit = total*7.5;

      //initializes highest and lowest sales value//
      String Highestday = day[ 0 ];
      String Lowestday = day[ 0 ];
      int Highestamount = amount[ 0 ];
      int Lowestamount = amount[ 0 ];

      //loop to determines highest and lowest value//
      for(int i=1; i<day.length; i++) {
            if (amount[ i ]  > Highestamount){
            Highestamount = amount[ i ];
            Highestday = day[i];
        }

            if(amount[ i ] < Lowestamount){
            Lowestamount = amount[ i ];
            Lowestday = day[i];
        }
      }
      //display the weekly mango sales report//
      System.out.print("\n=====\tWEEKLY MANGO SALES REPORT\t=====");
      System.out.println("\nTotal mango sold (in kg) in a week : "+total);
      System.out.println("PROFIT of the week : RM"+profit);
      System.out.println("Average mango sold (in kg) : "+average);
      System.out.println("The highest amount mango sold (in kg) is "+Highestamount+ " on day "+ Highestday);
      System.out.print("The lowest amount mango sold (in kg) is "+Lowestamount+ " on day "+ Lowestday);
    }
  }
```

Hasil program

ULASAN

Kod program Java ini merekodkan jualan mangga mingguan dan menganalisis data dengan mengira jumlah jualan, purata jualan, dan keuntungan jualan mingguan. Ia juga menentukan hari jualan tertinggi dan terendah.

Selain itu, kod program ini merangkumi konsep asas seperti *arrays, loop,* dan *conditional statements.*

Oleh itu, kod program ini mengukuhkan pemahaman saya tentang asas Java dan asal logik analisis data yang merupakan kemahiran asas dalam bidang sains komputer.
